9/18/2024 12:26:32 PM Autodesk Docs://Three Crowns Park - Pioneer Place/THREE CROWNS PARK - PIONEER PLACE_ARCH23.rvt

100% DESIGN DEVELOPMENT
NOT FOR CONSTRUCTION

GENERAL NOTES

1. ALL DIMENSIONS REFER TO THE FACE OF CURB UNLESS OTHERWISE NOTED.
2. BUILDING DIMENSIONS ARE TO THE OUTSIDE FACE OF BUILDING UNLESS OTHERWISE NOTED.
3. REFER TO ARCHITECTURAL AND STRUCTURAL PLANS TO VERIFY ALL BUILDING DIMENSIONS.
4. RADII ADJACENT TO PARKING STALL AND NOT DIMENSIONED ON THIS PLAN SHALL BE 3-FEET, TYPICAL.
5. REFER TO ARCHITECTURAL PLANS FOR MONUMENT SIGN DETAILS. SEE MEP PLANS FOR SITE ELECTRICAL DRAWINGS.
6. ALL PROPOSED ON-SITE STRIPING SHALL BE PAINTED UNLESS OTHERWISE NOTED.

PAVING AND CURB LEGEND

- STANDARD DUTY ASPHALT PAVEMENT — SEE CONSTRUCTION DETAILS FOR PAVEMENT SECTION
- PERMEABLE PAVERS — SEE CONSTRUCTION DETAILS FOR PAVEMENT SECTION
- CONCRETE SIDEWALK — SEE CONSTRUCTION DETAILS FOR SIDEWALK SECTION
- STANDARD PITCH CONCRETE CURB AND GUTTER

KEY NOTES

1. B6.12 CONCRETE CURB AND GUTTER, TYP. (SEE DETAILS)
2. ACCESSIBLE PAVEMENT MARKINGS, TYP. (SEE DETAILS)
3. ACCESSIBLE PARKING SIGN, TYP. (MUTCD R7-8, SEE DETAILS)
4. CONNECT TO EXISTING PAVEMENT, SIDEWALK, CURB, TYP.
5. 1' CONCRETE RIBBON CURB
6. DEPRESSED CURB AND GUTTER
7. RELOCATED LIGHTPOLE
8. GENERATOR

PARKING SUMMARY

EXISTING PARKING SPACES	= 36	SPACES
EXISTING ACCESSIBLE PARKING SPACES	= 2	SPACES
EXISTING PARKING SPACES REMOVED	= 15	SPACES
EXISTING ACCESSIBLE PARKING SPACES REMOVED	= 0	SPACES
PARKING SPACES PROVIDED	= 83	SPACES
ACCESSIBLE PARKING SPACES REQUIRED	= 4	SPACES
ACCESSIBLE PARKING SPACES PROVIDED	= 4	SPACES
TOTAL PARKING SPACES PROVIDED	= 87	SPACES

GRADING NOTES

1. CONTRACTOR TO VERIFY ALL EXISTING TOPOGRAPHY AND STRUCTURES ON THE SITE AND IMMEDIATELY NOTIFY THE ENGINEER OF ANY DISCREPANCIES PRIOR TO STARTING WORK.
2. ALL PAVEMENT SPOT GRADE ELEVATIONS AND RIM ELEVATIONS WITHIN OR ALONG CURB AND GUTTER REFER TO FLOW LINE ELEVATIONS UNLESS OTHERWISE NOTED.
3. ALL ELEVATIONS SHOWN DEPICT FINISHED GRADE UNLESS OTHERWISE NOTED. GENERAL CONTRACTOR TO COORDINATE WITH EXCAVATION, LANDSCAPE AND PAVING SUBCONTRACTORS REGARDING TOPSOIL THICKNESS FOR LANDSCAPE AREAS AND PAVEMENT SECTION THICKNESS FOR PAVED AREAS TO PROPERLY ENSURE ADEQUATE CUT TO ESTABLISH SUBGRADE ELEVATIONS.
4. NO EARTHEN SLOPE SHALL BE GREATER THAN 3:1, UNLESS OTHERWISE NOTED.
5. MAXIMUM SLOPE IN ACCESSIBLE PARKING SPACES AND LOADING ZONES SHALL NOT EXCEED 2.0% IN ALL DIRECTIONS.
6. MAXIMUM RUNNING SLOPE SHALL NOT EXCEED 5% AND CROSS SLOPE SHALL NOT EXCEED 2% ON ALL SIDEWALKS AND ACCESSIBLE ROUTES.
7. WHEN NATURAL FLOW OF DRAINAGE IS AWAY FROM CURB, CONTRACTOR TO INSTALL REVERSE GUTTER PITCH.
8. MATCH EXISTING ELEVATIONS AT THE PROPERTY LIMITS.

GRADING LEGEND

HP = HIGH POINT
LP = LOW POINT
RIM = RIM ELEVATION
ME = MATCH ELEVATION

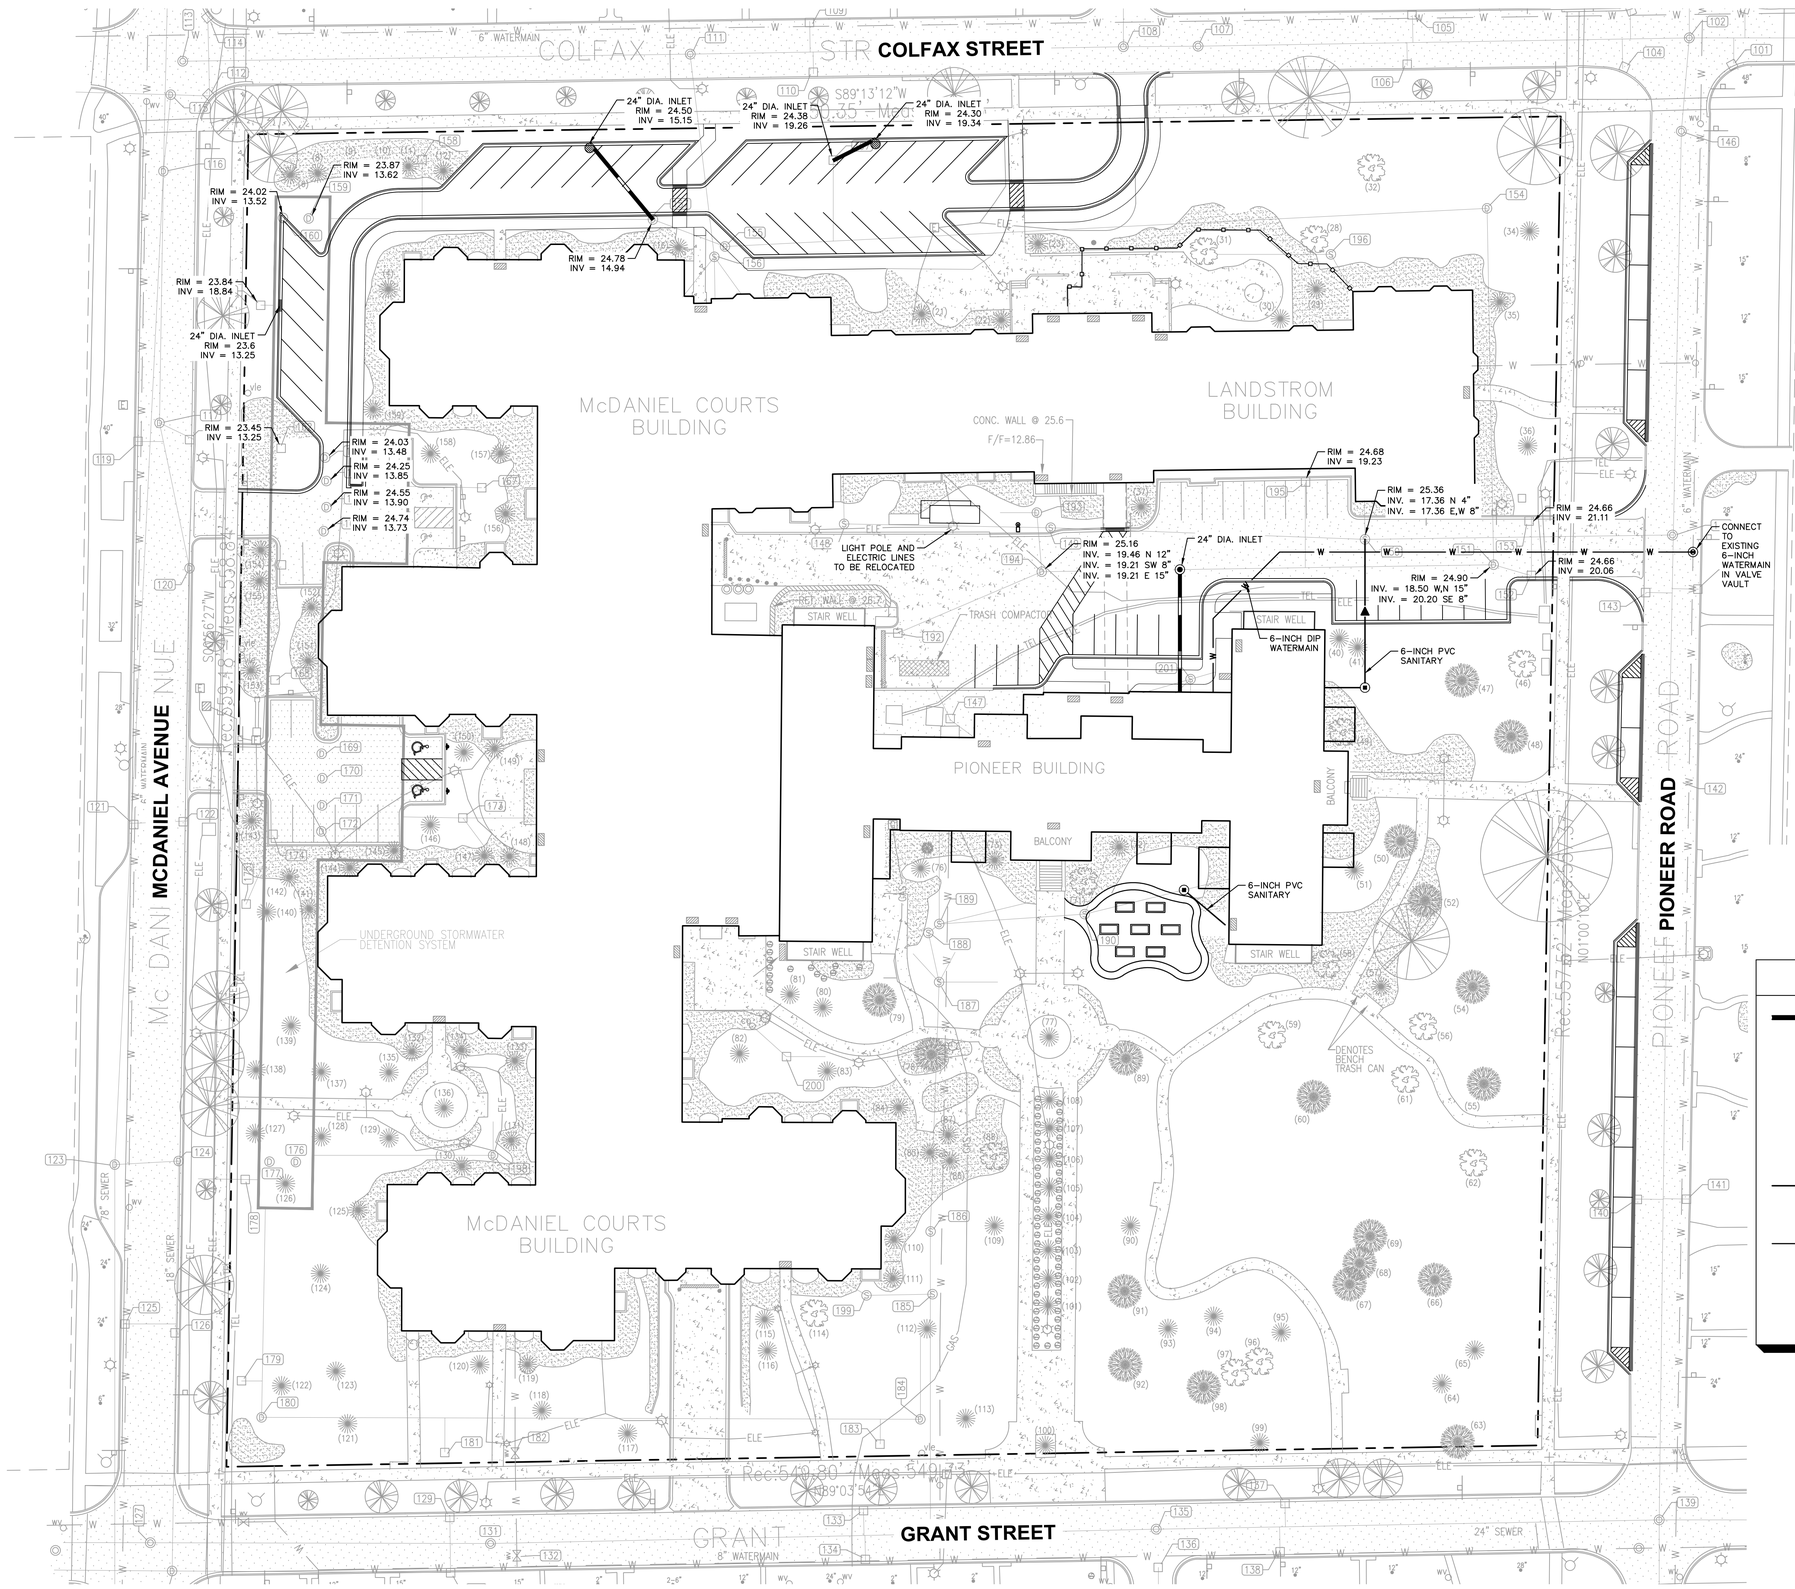
100% DESIGN DEVELOPMENT
NOT FOR CONSTRUCTION



UTILITY NOTES

1. ALL WATER LINES ≥ 3" SHALL BE DUCTILE IRON PIPE, CLASS 52.
2. ALL SANITARY SEWER LINES SHALL BE PVC MEETING, ASTM D-3034 SDR 26 EXCEPT FOR SANITARY SEWER THAT CROSSES ABOVE WATER MAIN, THIS PIPE SHALL BE AWWA C900 (UNLESS WATER MAIN CASING IS UTILIZED). PROVIDE 42" MINIMUM COVER.
3. CONTRACTOR SHALL COORDINATE ANY DISRUPTIONS TO EXISTING UTILITY SERVICES WITH ADJACENT PROPERTY OWNERS.
4. ALL ELECTRIC AND TELEPHONE EXTENSIONS INCLUDING SERVICE LINES SHALL BE CONSTRUCTED TO THE APPROPRIATE UTILITY COMPANY SPECIFICATIONS. ALL UTILITY DISCONNECTIONS SHALL BE COORDINATED WITH THE DESIGNATED UTILITY COMPANIES.
5. CONSTRUCTION SHALL NOT START ON ANY PUBLIC UTILITY SYSTEM UNTIL WRITTEN APPROVAL HAS BEEN RECEIVED BY THE ENGINEER FROM THE APPROPRIATE GOVERNING AUTHORITY AND CONTRACTOR HAS BEEN NOTIFIED BY THE ENGINEER.
6. CONTRACTOR TO CALL "JULIE" (1-800-892-0123) TO COORDINATE FIELD LOCATIONS OF EXISTING UNDERGROUND UTILITIES BEFORE ORDERING MATERIALS OR COMMENCING CONSTRUCTION. NOTIFY ENGINEER OF ANY DISCREPANCIES IMMEDIATELY.
7. PRIOR TO THE CONSTRUCTION OF OR CONNECTION TO ANY STORM DRAIN, SANITARY SEWER, WATER MAIN OR ANY OTHER UTILITIES, THE CONTRACTOR SHALL EXCAVATE, VERIFY AND CALCULATE ALL POINTS OF CONNECTION AND ALL UTILITY CROSSINGS AND INFORM THE ENGINEER AND THE OWNER/ DEVELOPER OF ANY CONFLICT OR REQUIRED DEVIATIONS FROM THE PLAN. NOTIFICATION SHALL BE MADE A MINIMUM OF 72 HOURS PRIOR TO CONSTRUCTION. THE ENGINEER AND ITS CLIENTS SHALL BE HELD HARMLESS IN THE EVENT THAT THE CONTRACTOR FAILS TO MAKE SUCH NOTIFICATION. THE MUNICIPALITY SHALL BE NOTIFIED OF ANY AND ALL CHANGES TO THE DESIGN PLANS.
8. CONTRACTOR SHALL COMPLY COMPLETELY WITH THE LATEST STANDARDS OF OSHA DIRECTIVES OR ANY OTHER AGENCY HAVING JURISDICTION FOR EXCAVATION AND TRENCHING PROCEDURES. THE CONTRACTOR SHALL USE SUPPORT SYSTEMS, SLOPING, BENCHING AND OTHER MEANS OF PROTECTION. THIS IS TO INCLUDE, BUT NOT LIMITED FOR ACCESS AND EGRESS FROM ALL EXCAVATION AND TRENCHING. CONTRACTOR IS RESPONSIBLE FOR COMPLYING WITH PERFORMANCE CRITERIA AS REQUIRED BY OSHA.
9. CONTRACTOR TO AVOID DISRUPTION OF ANY ADJACENT TENANT'S TRAFFIC OPERATIONS DURING INSTALLATION OF UTILITIES.
10. ALL DIMENSIONS ARE TO CENTERLINE OF PIPE OR CENTER OF MANHOLE UNLESS NOTED OTHERWISE.
11. SEE ARCHITECTURAL AND MEP PLANS FOR EXACT UTILITY CONNECTION LOCATIONS AT BUILDING.
12. LIGHT POLES SHOWN FOR COORDINATION PURPOSES ONLY AND DO NOT REPRESENT ACTUAL SIZE. SEE SITE LIGHTING PLANS BY OTHERS FOR MORE INFORMATION.
13. SEE DETAILS FOR LOCATING STORM STRUCTURES WITHIN THE CURB LINE.
14. STORMWATER FACILITIES MUST BE FUNCTIONAL BEFORE BUILDING CONSTRUCTION BEGINS IF REQUIRED BY AUTHORITY HAVING JURISDICTION.

UTILITY LEGEND

- PROPOSED STORM SEWER LINE
- PROPOSED OPEN LID STORM STRUCTURE (PAVEMENT USE NEENAH R-2540) (GRASS USE NEENAH R-4340-B BEEHIVE)
- PROPOSED CLOSED LID STORM STRUCTURE (PAVEMENT USE NEENAH R-1713) (GRASS USE NEENAH R-1786)
- PROPOSED COMBINATION CURB INLET (B6.12 C&G USE NEENAH R-3281-A)
- PROPOSED FLARED END SECTION
- PROPOSED SANITARY SEWER LINE
- PROPOSED SANITARY MANHOLE
- PROPOSED STORM/SANITARY CLEANOUT
- PROPOSED WATER LINE
- PROPOSED VALVE VAULT
- PROPOSED VALVE BOX
- PROPOSED FIRE HYDRANT
- PROPOSED LIGHT POLE

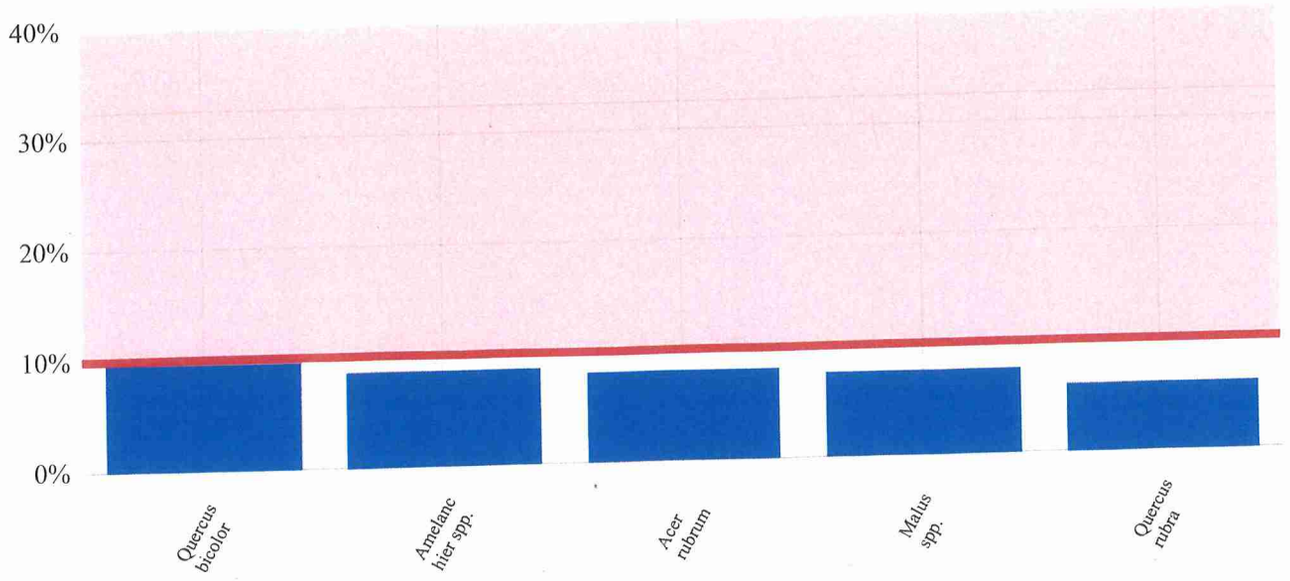
Tree Diversity

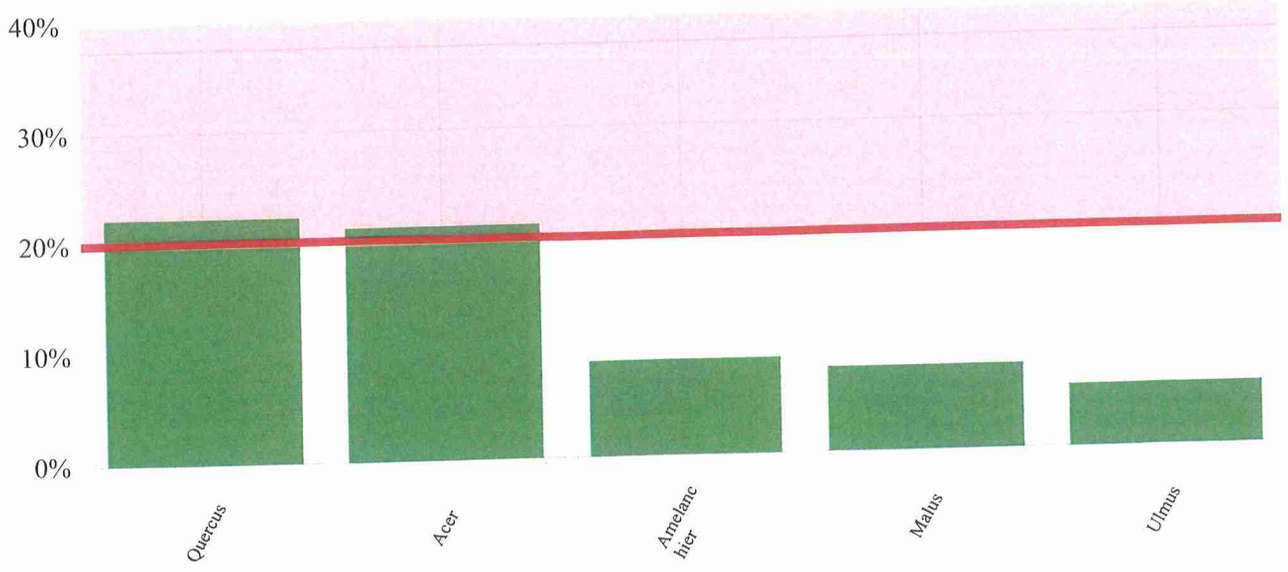
The Tree Diversity charts show the top five most common tree species, genera, and families within the inventory or subset of your inventory based on data or map filters. The red horizontal lines demonstrate the 10-20-30 rule, which suggests an urban tree population should include no more than 10% of any one species, 20% of any one genus, or 30% of any family. Tree managers, researchers, and practitioners use these parameters first recommended by Santamour in 1990 as an industry standard to measure a tree population's resiliency to harmful tree pests and diseases and other factors. Consider establishing these thresholds on a community-wide scale and/or at smaller-scales such as by neighborhood, street corridor, block, or project.

✗ You have exceeded the 10% species threshold



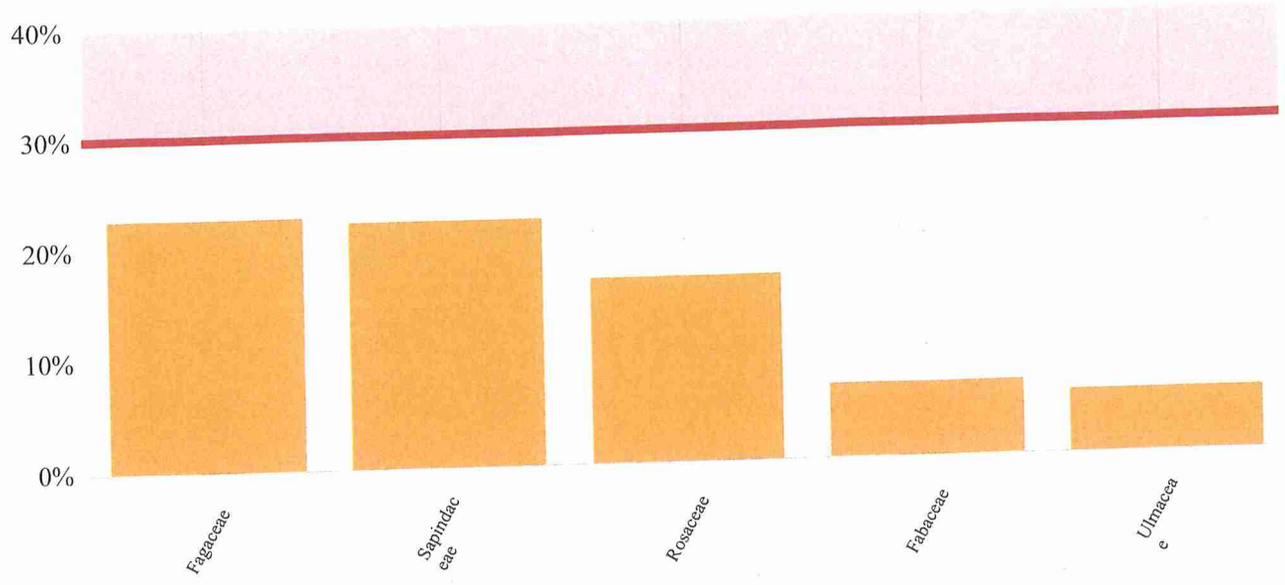
Top 5 Species

✗ You have exceeded the 20% genus threshold



Top 5 Genera

✓ *You have met the 30% family rule*

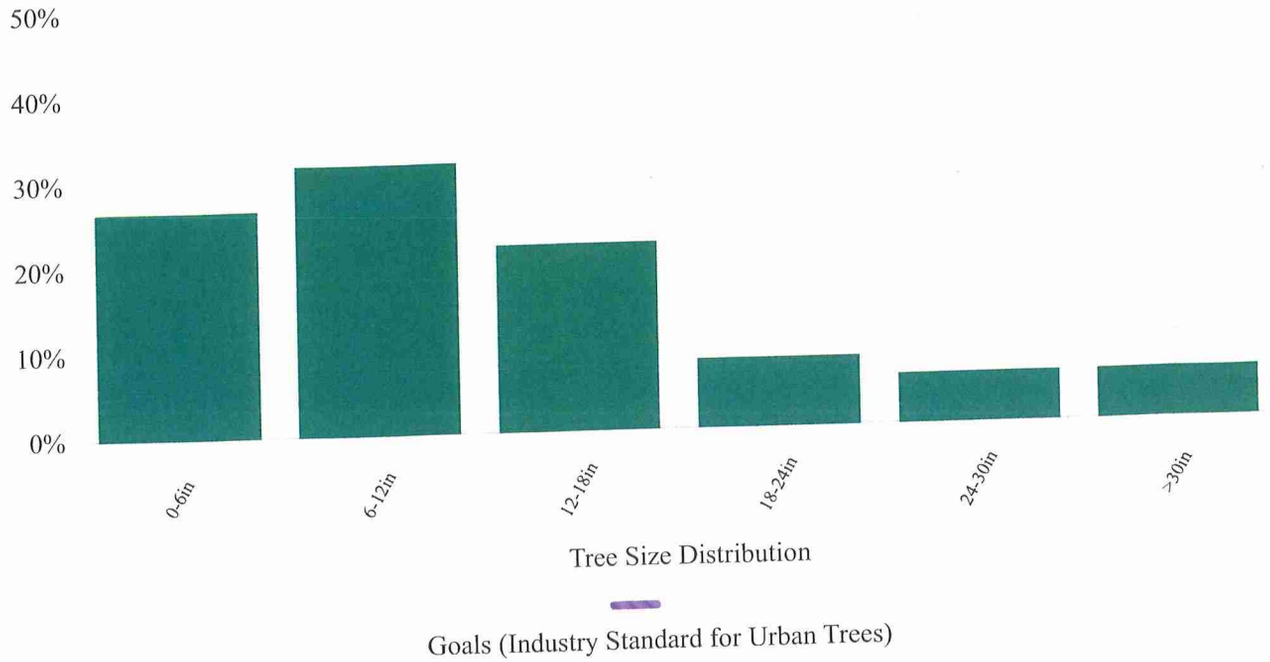


Top 5 Families

Santamour, F.S., 1990. Trees for urban planting: diversity, uniformity and common sense. Paper Presented at the Proceedings of the 7th Conference of the Metropolitan Tree Improvement Alliance.

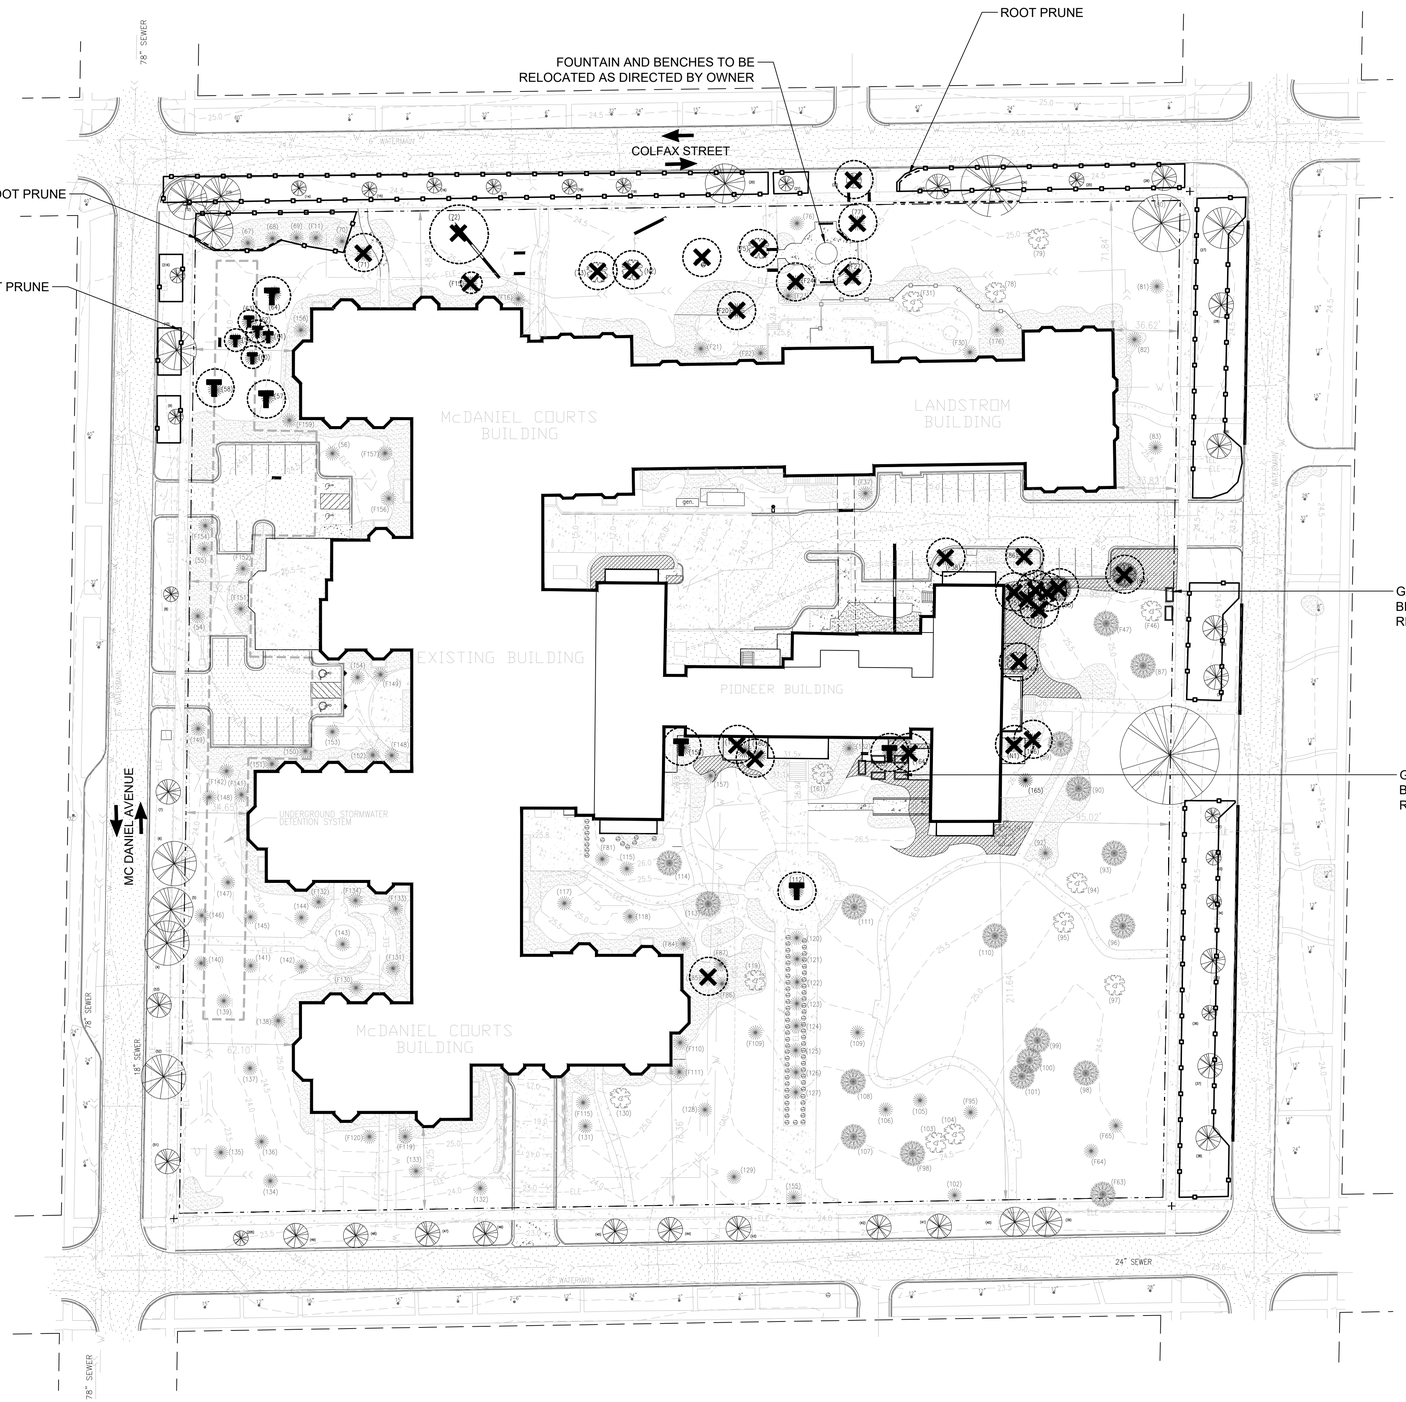
Tree Size Distribution

This chart displays the most recently recorded diameter (diameter at breast height or DBH, measured 4.5-feet above natural grade) values along with DBH goals (as defined by Richards et al. in 1983 and 1993). This information is often used to identify a tree population's structure, distribution of tree canopy cover and associated benefits, current maintenance needs, projecting potential surges in maintenance and removal needs, among other considerations in sustainably managing trees in communities. A distribution of tree size classes as indicated by the "Goal" uniformly distributes tree benefits and maintenance needs. Smaller, younger trees compared to large diameter trees aim to compensate for the loss of tree canopy cover and associated benefits that occur when large trees reach their full potential, mature, and begin to decline, requiring eventual removal (in most cases).



Richards, N. A. 1983. "Diversity and Stability in a Street Tree Population." Urban Ecology 7(2):159 -171.

Richards, N.A. 1993. Reasonable guidelines for street tree diversity. Journal of Arboriculture 19:344 -349.



LEGEND

- EXISTING TREE TO REMAIN AND PROTECT
- EXISTING SHRUBS TO REMAIN AND PROTECT
- EXISTING TREE TO BE REMOVED
- EXISTING TREE TO BE TRANSPLANTED
- TREE / ROOT / SOIL PROTECTION FENCING
- ROOT PRUNE
- CLEAR AND GRUB

LANDSCAPE PROTECTION AND REMOVAL NOTES:

1. INSPECT SITE PRIOR TO BID TO CONFIRM PROPOSED PROTECTION CONDITIONS.
2. ALL EXISTING LANDSCAPE AREAS TO BE EXCAVATED FOR NEW WORK SHALL BE STRIPPED OF ALL TOPSOIL. TOPSOIL SHALL BE STOCKPILED IN APPROVED AREAS AS DESIGNATED BY THE OWNER. ANY MATERIAL UNSUITABLE FOR TOPSOIL AS INDICATED IN SPECIFICATION SHALL BE EXCAVATED AND DISPOSED OF IN A LEGAL MANNER. IF UNSUITABLE MATERIAL EXTENDS INTO SUBGRADE, REMOVAL AND FILLING OF EXCAVATED MATERIAL SHALL BE APPROVED OF BY OWNER, AND REPLACED WITH SUITABLE MATERIAL TO MEET SURROUNDING EXISTING AND PROPOSED SUBGRADE ELEVATIONS.
3. TREE SPECIES AND CALIPER SIZES TO BE FIELD VERIFIED BY GENERAL CONTRACTOR'S CERTIFIED ARBORIST.
4. PROTECT TREE ROOTS OF EXISTING TREES TO REMAIN ADJACENT TO PAVEMENT REMOVAL PER PROJECT REQUIREMENTS. REMOVE ALL PAVEMENT MATERIALS AND STONE TO SUBGRADE.
5. GENERAL CONTRACTOR'S CERTIFIED ARBORIST TO ROOT PRUNE EXISTING TREES PER PROJECT REQUIREMENTS PRIOR TO START OF CONSTRUCTION.
6. GENERAL CONTRACTOR TO STUMP GRIND ALL TREES TO BE REMOVED OUTSIDE OF BUILDING FOOTPRINT PER SPECIFICATIONS.
7. UTILITIES INDICATED FOR REFERENCE ONLY. ASSIST OWNER WITH CONFLICT RESOLUTION TO ADDRESS LANDSCAPE PROTECTION REQUIREMENTS.
8. PROVIDE PACKAGING AND SAFE LOCAL TRANSPORT FOR EXISTING SITE MATERIALS TO BE REMOVED AND SALVAGED PER OWNER DIRECTION.
9. SEE SPECIFICATION FOR LANDSCAPE PROTECTION AND REMOVAL REQUIREMENTS.
10. ALL LANDSCAPE OUTSIDE SCOPE OF WORK BOUNDARY TO REMAIN AND BE PROTECTED.

FEATURES

- Reliable, uniform, glare free illumination
- Types 1, 2, 3, 4W, 5Q, and 5W distributions
- 3000K, 4000K, 5000K CCT
- 0-10V dimming ready
- Integral surge suppression
- Upgrade Kits

See Certification Specifications

PROMENADE

Promenade PRM22

SPECIFICATIONS

CONSTRUCTION

- All housing components aluminum 360 alloy, sealed with continuous silicone rubber gaskets
- Standard configurations do not require a flat lens; optional lenses is tempered glass
- All internal and external hardware is stainless steel
- Finish: fade and abrasion resistant, electrostatically applied, thermally cured, triglycidal isocyanurate (TGIC) polyester powdercoat
- Optical bezel finish is match the luminaire housing

LED/OPTICS

- Optical cartridge system consisting of a die cast heat sink, LED engine, TIR optics, gasket and bezel plate.
- Cartridge is easily disassembled to replace components. Optics are held in place without the use of adhesives.
- Molded silicone gasket ensures a weather-proof seal around each individual LED.
- Features revolutionary individual LED optical control based on high performance TIR optical designs.
- House Side Shield is available on Standard and Clear Lens options except any Type 5 distribution. House Side Shield is not available for any distribution using a Diffused Lens.

INSTALLATION

- Fixtures must be grounded in accordance with national, state and/or local electrical codes. Failure to do so may result in serious personal injury.

ELECTRICAL

- Luminaires have integral surge protection, UL recognized and have a surge current rating of 10,000 Amps using the industry standard 8/20uSec wave and surge rating of 372J
- Drivers are UL recognized with an inrush current maximum of <20.0 Amps maximum at 230VAC
- 100%-1% dimming range. Fixture will be wired for low voltage 0-10V dimming control
- 
- Driver and surge suppressor are mounted to a prewired tray with quick disconnects that may be removed from the gear compartment

CERTIFICATIONS

- ETL listed under UL 1598 and CSA C22.2 No. 250.0-08 for wet locations
- This product qualifies as a "designated country construction material" per FAR 52.225-11 Buy American-Construction Materials under Trade Agreements effective 6/06/2020

WARRANTY

- 5 year warranty

Market Feasibility Statement

Adaptive Reuse of Pioneer Place at Three Crowns Park
City of Evanston, Illinois

TO: City of Evanston – Department of Community Development

FROM: Applicant

RE: Market Feasibility Statement – Pioneer Place Adaptive Reuse

DATE: January 23, 2026

Executive Summary

This Market Feasibility Statement supports the Applicant's proposal to renovate and adaptively reuse Pioneer Place, a designated Evanston Landmark and the oldest structure within the Three Crowns Park Continuing Care Retirement Community (CCRC). The proposed project converts 44 formerly vacant assisted living units into 23 independent living units within an established senior living campus.

Based on national, state, regional, and local demographic trends, senior housing market conditions, and direct expressions of interest from prospective residents, the proposed independent living units are market-feasible. The project is modest in scale, responds to documented demand for independent living options, and supports City planning goals related to landmark preservation, adaptive reuse, and aging in place.

1. Purpose and Background

This memorandum is submitted in support of the Applicant's proposal to renovate and adaptively reuse Pioneer Place at Three Crowns Park in Evanston, Illinois. Pioneer Place has been vacant since 2019 and is proposed to be rehabilitated and reconfigured to meet current independent living market demand. The purpose of this statement is to demonstrate that the proposed project is supported by market conditions and demand.

2. Project Description

Three Crowns Park is an established CCRC consisting of McDaniel Courts, Landstrom Manor, and Pioneer Place. The campus currently includes 122 independent living units, 119 assisted living and memory care units, and 67 skilled nursing beds. The Applicant proposes to convert 44 former assisted living units in Pioneer Place into 23 independent living units, reflecting contemporary unit size, accessibility, and amenity expectations.

3. Market Area Definition

The market area for independent living units within a CCRC is driven primarily by proximity to family, healthcare providers, and established social networks. Accordingly, two market areas are defined for this analysis.

3.1 Primary Market Area

The Primary Market Area consists of Evanston and immediately adjacent North Shore communities, including Wilmette, Skokie, Winnetka, and Glenview. These municipalities exhibit above-average concentrations of residents aged 65 and older, strong household wealth characteristics, and long-standing residential tenure, all of which support demand for independent living units.

3.2 Secondary Market Area

The Secondary Market Area includes the broader North Side of Chicago and North Suburban Cook County. This area represents households seeking to remain near family and medical services while accessing high-quality independent living within an established CCRC setting.

4. National Senior Housing Trends

National demographic trends reflect sustained growth in the population aged 65 and older, driven by the aging Baby Boomer cohort. By 2030, all Baby Boomers will be at least 65 years old, significantly expanding the pool of households seeking senior housing. Independent living demand is expected to continue increasing as older adults seek maintenance-free housing with access to services and social engagement.

5. State and Regional Demand Conditions

The State of Illinois is projected to experience substantial growth in its population aged 65 and over, with estimates indicating an increase of approximately 40 percent by 2035. Cook County and North Shore communities already exhibit higher-than-average concentrations of older adults, reinforcing demand for additional independent living opportunities within established communities.

6. Local Market Conditions

Evanston and surrounding municipalities have a higher share of residents aged 65 and older compared to state and national averages. Combined with strong access to transit, healthcare, and cultural amenities, these characteristics support demand for independent living options located within the community.

7. Competitive Supply Context

Senior housing supply growth in the Chicago metropolitan area has remained constrained in recent years, while occupancy levels have increased. Limited new independent living development, coupled with rising demand, supports the feasibility of modest, well-located additions to the independent living inventory.

8. Evidence of Project-Specific Demand

The Applicant has received numerous expressions of interest from prospective residents interested in residing in the proposed independent living units at Pioneer Place. This direct evidence of demand further supports the market feasibility of the proposed project.

9. Planning and Policy Considerations

The proposed adaptive reuse of Pioneer Place advances City planning objectives, including preservation of historic landmarks, reinvestment in existing structures, efficient use of developed land, and support for aging-in-place within the community.

10. Conclusion

Based on demographic trends, senior housing market conditions, and project-specific demand, the proposed renovation and conversion of Pioneer Place to 23 independent living units is market-feasible. The project is appropriately scaled and consistent with the City of Evanston's planning and preservation goals.

Appendix A: Market Data Sources and Citations

The following publicly available sources were relied upon in preparing this Market Feasibility Statement:

- U.S. Census Bureau – National and local population age cohort data.
- Illinois Department on Aging – Statewide aging population projections.
- National Investment Center for Seniors Housing & Care (NIC) – Senior housing occupancy and supply trends.
- Cook County and municipal demographic profiles for Evanston and surrounding North Shore communities.
- Senior Housing News.
- NIC Map.
- Housing Gap Analysis-City of Evanston, Final Report
- Applicant-provided expressions of interest.

These sources collectively support the conclusions regarding demand for additional independent living units within the Evanston and North Shore market area.

Kimley»Horn

MEMORANDUM

To: Emiel Guede
BLDD Architects

From: Peter Lemmon, P.E., PTOE
Anna Guzik, EIT

Date: November 19, 2025

Subject: Parking and Traffic Access/Circulation Evaluation
Three Crowns Park
Evanston, Illinois

INTRODUCTION

Kimley-Horn and Associates, Inc. (Kimley-Horn) was retained by BLDD Architects to prepare a parking and transportation analysis associated with a proposed expansion at the Three Crowns Park senior residential community in Evanston, Illinois. The subject property is bound by Colfax Street on the north, Pioneer Road on the east, Grant Street on the south, and McDaniel Avenue on the west. **Exhibit 1** illustrates the current property and surrounding area.

Currently, Three Crowns Park is home to 120 residents and maintains 147 off-street parking spaces. Proposed plans for the community include an expansion of 26 independent living units for 40 potential new residents and a net increase of 28 off-street parking spaces, largely located in a planned surface lot extending from the existing front lot accessible via McDaniel Street. The proposed plan results in 159 units (independent living, assisted living, and memory care), 48 skilled nursing beds, 160 residents, and a total of 175 off-street parking spaces.

Vehicular access to the existing community is currently available via McDaniel Avenue (main building entry and limited surface parking), Pioneer Road (underground parking, surface parking, and service access), and Grant Street (underground parking). The existing access locations remain in the proposed plan, as well as a new outbound-only exit drive on Colfax Street aligned with an existing alley.

This memorandum documents the analysis methodology, outlines parking data collected, summarizes an evaluation of parking and transportation elements of the proposed plan, and highlights key findings.

EXISTING CONDITIONS

Kimley-Horn visited the subject site and surrounding area to collect relevant information pertaining to site context, surrounding land uses, parking, the adjacent street system, lane configurations and traffic control at nearby intersections, and other key transportation characteristics, This section of the report details information on the existing conditions.

Area Land Uses

Three Crowns Park is a multi-unit senior residential community located in a largely single-family residential neighborhood. Single-family homes are located to the north, east, and south of the site. Immediately west of the site is Lincolnwood Elementary School. Residences are also west of the site along Colfax and Grant Streets across from the school. Perkins Woods, part of the Forest Preserves of Cook County, is situated immediately west of the school.

Existing Roadway Characteristics

Consistent with the land uses comprising the surrounding neighborhood, the adjacent street network is made of primarily residential streets. The streets situated adjacent to the site and serving the surrounding neighborhood are detailed below with lane configurations and intersection traffic controls graphically depicted on **Exhibit 2**.

Colfax Street is a one-way eastbound street along the northern site boundary providing a single travel lane and on-street parking along both sides of the street. West of McDaniel Avenue, Colfax Street maintains two-way traffic flow. The intersections of Colfax Street at McDaniel Avenue and Pioneer Road both include all-way stop control. Colfax Street has a 25 mph posted limit (20 mph during school days) and is under City of Evanston jurisdiction.

Pioneer Road is a two-way north-south street along the east site boundary. One lane is provided in each direction plus on-street parking along both sides of the street. The intersections of Pioneer Road with Colfax Street and Grant Street are both under all-way stop sign control. Pioneer Road has a 25 mph posted speed limit and is under City of Evanston jurisdiction.

Grant Street is a two-way east-west street along the south side of the site. Adjacent to the site, Grant Street maintains one travel lane in each direction with on-street parking along the south side of the street. Grant Street has a 25 mph posted speed limit (20 mph during school days) and is under City of Evanston jurisdiction.

McDaniel Avenue, while a residential street, often functions as a collector street with more through traffic than other adjacent streets, serving as a common north-south route through the neighborhood between signalized intersections at Central Street to the north and Golf Road to the south. McDaniel Avenue has a 25 mph posted speed limit (20 mph during school days) and is under City of Evanston jurisdiction.

Existing Parking System

Three Crowns Park currently provides 147 off-street parking spaces, including 5 dedicated ADA-accessible spaces across various surface lots and an underground garage. Approximately 94 on-street spaces are available along the blocks Colfax Street, Pioneer Road, Grant Street, and McDaniel Avenue adjacent to the site.

Of the 147 off-street spaces provided, 103 spaces are located within the underground garage and 44 spaces are maintained at-grade within multiple surface parking areas. For the purposes of this study, the parking was divided into four subareas to organize data collection and evaluate parking characteristics based on location, type, user and designations, as shown on Exhibit 2.

EXHIBIT 2

ROAD CHARACTERISTICS & PARKING LOCATIONS

PARKING DATA COLLECTION

Kimley-Horn conducted parking counts on two days – Wednesday, October 12, 2025 and Sunday, October 15, 2025. These two dates represent a typical weekday and weekend day. Based on discussions with Three Crowns Park representatives, Sundays are typically the busiest days of the week with the highest number of visitors. The parking capacity was inventoried and counts of occupied spaces were collected hourly over eight hours each day, starting at 10:00 AM with the last count starting at 5:00 PM. This period was chosen as it coincides with typical periods of peak resident, visitor, and employee activity on the property.

A summary of the observed hourly parking utilization by parking subarea is presented in **Table 1**. This summary includes the parking utilization for each hourly period along with the percentage occupancy and number of available spaces for both the overall site and the identified subareas.

Peak Hour Data Review

As presented in Table 1, the peak parking activity (highlighted in green) was observed at 1:00 PM during the Sunday observations with 63 percent of the overall off-street spaces occupied and 55 open spaces. During the weekday observations, the peak parking activity was slightly later at 3:00 PM, and the percentage of spaces occupied was higher with 82 percent of the overall off-street spaces occupied and 27 open spaces.

Generally, parking facilities reach their effective capacity when parking occupancy reaches 85-95 percent of the total available spaces ("effective capacity"). Effective capacity is the perception that the parking supply is practically full and few open spaces remain. This characteristic is subjective and generally depends on the use(s) served by the parking, how often spaces turn over, and familiarity that parkers have with the lot or garage. Typically, it is desirable to maintain an effective capacity buffer to limit the need to circulate throughout the lot hunting for the last few available spaces, account for inefficient parkers that may encroach into an adjacent space, or to consider temporary loss of spaces due to situations such as snow storage, maintenance, etc.

Parking lots with frequent, familiar users that exhibit low turnover (such as employees and residents) are generally considered at effective capacity at the upper end of this range. Parking lots with less frequent/familiar users, those demonstrating higher turnover, or those with whom a greater level of customer service is intended generally reach effective capacity at the lower end of the range.

Three Crowns Park exhibits low parking turnover with employees, residents, and repeat visitors. As such, 90-95 percent utilization represents a reasonable target effective capacity.

As shown on the following page in Table 1, the overall utilization of the on-site parking is 63 and 82 percent during the Sunday and Wednesday peak hours, respectively. However, at times, the front surface lot generally used for visitor parking nears the typical range of effective capacity while the low turnover garage parking reserved for residents and employees peaks at 74 percent.

Kimley»Horn

PARKING EVALUATION

Proposed Plan and Future Parking Supply

The proposed expansion plan for Three Crowns Park consists of 26 additional independent living units, yielding 40 new residents and 3 additional employees (5 additional staff assigned to the daytime shift). To support the expansion plan, a reconfigured parking plan is proposed with a net increase of 28 off-street parking, largely located on the northern portion of the property. With the proposed plan, the overall site would provide a total of 175 off-street parking spaces, including 103 garage spaces and 72 total off-street parking spaces across various surface parking lots.

The new north parking lot is planned to extend from the existing front surface lot. This proposed surface lot would allow one-way traffic flow, entering from the west on McDaniel Street via the existing inbound-only access and exiting to the north on Colfax Street via a new driveway aligned with an existing alley. The proposed parking plan also includes a reconfigured parking area in the back parking lot accessible via the existing full-access drive on Pioneer Road.

The proposed parking plan also includes improvements to the adjacent on-street parking along the west side of Pioneer Road. The plan shifts the on-street parking further west into the existing parkway, limiting the obstruction to travel lanes and leading to more usable parking and improved traffic conditions along Pioneer Road.

A summary comparing the existing and proposed parking allocation is outlined in **Table 2**.

Table 2. Existing and Proposed Parking Allocation Plan

Location	Existing Capacity	Difference in spaces	Proposed Capacity

Parking Demand Projections

To develop projected parking needs associated with the proposed Three Crowns Park expansion, Kimley-Horn coordinated with Three Crowns Park staff to define the existing and planned expansion in terms of additional units, residents, and employees which are defined in **Table 3**.

Table 3. Existing and Proposed Populations

Population	Existing	Proposed Expansion	Proposed Total
Number of Units			
Independent Living Units	91	*+26*	117
Assisted Living Units	25	-	25
Assisted Living Units with Memory Care	17	-	17
Skilled Nursing Beds	48	-	48
Number of Residents			
Total	120	*+40*	160
Number of Employees			
Total	171	*+3*	174
Largest Shift	50	*+5*	55

Based on conversations with Three Crowns Park staff, it is Kimley-Horn's understanding that approximately 80 residents are assigned a parking space in the underground garage, and the additional 23 garage spaces are assigned to employees. During the larger employee shifts, employees without an assigned garage space will park in the back parking lot or use the on-street parking available surrounding the Three Crowns Park. Employees are instructed not to park in the front surface lot.

Using the existing observed parking demand (Table 1) and existing populations (Table 3), Kimley-Horn calculated parking demand rates and parking growth projections using two approaches – one based on the sum of projections calculated by population category and another based on the site's overall peak hour parking demand.

It should be noted that the underground garage (resident parking) spaces are assumed to only be available only to the independent living units. Thus, the assisted living units and skill nursing beds were not accounted for in the parking generation rate for the resident parking; however, these units are still factored in the visitor parking generation rates.

Table 4 summarizes the calculated population and overall peak hour parking generation rates and growth projections.

Table 4. Three Crowns Expansion Parking Generation Rates and Growth Projections[1]

Population Category	Growth Unit	Proposed Growth	Sunday Peak Hour		Wednesday Peak Hour	
			Demand Rate[2]	Parking Growth	Demand Rate	Parking Growth
Projected Parking Demand by User Group (Sum of Parking Demand per Individual Category Growth Unit)						
Resident	Resident	40	0.41	16	0.51	20
	Unit	26	0.54	14	0.67	17
Visitor	Resident	40	0.16	6	0.19	8
	Unit	26	0.10	3	0.13	3
Staff	Employee (Largest Shift)	3	0.48	2	0.72	4
	Employee	5	0.14	0	0.21	1
Total	Resident			24		32
	Unit			19		24
Projected Parking Demand Overall (Total Parking Demand per Growth Unit)						
Total	Resident	40	0.77	31	1.00	40
	Unit	26	1.01	26	1.32	34

[1] Analysis uses the conservative estimate based on overall parking projection for the entire site (highlighted in green)

[2] Demand rate calculated by dividing the parking counts associated with each population group, based on location and assigned parking locations as identified by Three Crowns Park staff, by the current population or unit count associated with that group

As presented in Table 4, the parking projections using both approaches are greatest when using the number of residents as the variable (as highlighted in green). The highest resulting parking growth projections for weekdays and Sundays (as highlighted in pink) are based on the overall parking demand rate, resulting in 31 additional spaces on Sundays and 40 additional spaces on weekdays during the peak hour. The parking evaluation assumes the high-end of the parking projections range.

Table 5 outlines the proposed plan's ability to accommodate the projected growth in parking demand during the Sunday and weekday peak hours considering the number of currently unoccupied parking spaces and the net increase in parking capacity as part of the project.

Based on the combination of currently unoccupied capacity, the 28 net additional off-street spaces included in the proposed plan, and the projected growth in parking utilization, the proposed total of 175 off-street parking spaces are expected to accommodate the increased parking demand projections during the weekday and Sunday peak hours. Across the overall site, the project peak

utilization is expected to reach 70 percent on weekdays and 91 percent on Sundays, but within a reasonable effective capacity buffer for this land use.

Table 5. Parking Demand Growth vs. Available Capacity

Parking Characteristic	Sunday Peak Hour	Wednesday Peak Hour
Existing Capacity	147	
Existing Peak Utilization (See Table 1)	92	120
Unoccupied Capacity (Existing Capacity – Utilization)	55	27
Proposed Net Capacity Increase	+28	
Available Capacity to Serve Projected Parking Demand (Unoccupied + Net Capacity Increase)	83	55
Projected Parking Utilization Growth (See Table 4)	31	40
Projected Excess Capacity (Available Capacity – Projected Utilization Growth)	55	15
Projected Percent Utilization ((Existing Utilization + Utilization Growth) / Total Capacity)	70%	91%

TRAFFIC EVALUATION

This section of the report summarizes the evaluation of anticipated traffic-related characteristics associated with the proposed plan and a qualitative review of the expected traffic impacts considering the projected traffic volumes in the context of observed conditions in the surrounding area and at adjacent intersections.

Trip Generation

In order to calculate trips generated by the proposed expansion, data was referenced from the Institute of Transportation Engineers (ITE) Trip Generation Manual, 12th Edition. Trip generation rates for the ITE Land Use Code (LUC) corresponding to the proposed use are shown in **Table 6**. A copy of the ITE data is provided in the Appendix.

Table 6. ITE Trip Generation Data

ITE Land Use	Unit	Weekday			Sunday
		Daily	AM Peak Hour	PM Peak Hour	Midday Peak Hour
Continuing Care Retirement Community (LUC 255)	Units	S = 2.28X + 198.69 50% in/50% out	S = 0.13X + 21.60 65% in/35% out	S = 0.13X + 55.26 29% in/61% out	S = exp(0.80LnX - 0.07) 52% in/48% out

X = Units

Given the proposed expansion of 26 units and the trip generation rates from Table 6, site-generated traffic projects were calculated and are summarized in **Table 7**. For the purposes of this analysis, site-generated trips are rounded to the nearest multiple of five.

Table 7. Site-Generated Traffic Projections

Land Use	Size	Weekday[1]						Sunday[1]		
		Daily	AM Peak Hour			PM Peak Hour			Midday Peak Hour	
			In	Out	Total	In	Out	Total	In	Out	Total
Continuing Care Retirement Community (LUC 255)	26 Units	260	15	10	25	20	40	60	10	5	15

[1] In/Out volumes are rounded to the nearest multiple of five.

Traffic Evaluation

The addition of traffic related to the proposed expansion is estimated to increase trips on the adjacent street network by approximately 25 and 60 total vehicle trips during the morning and evening peak hours, respectively. The Sunday midday peak hour is expected to experience 15 additional total trips resulting from the additional units.

Currently, the adjacent intersections operate well under all-way stop control and maintain plenty of capacity. The busiest periods align with school morning drop-off and afternoon pick-up periods at Lincolnwood Elementary School. Based on the residential nature of the adjacent roadways, as well

as the negligible congestion and delays noted during site observations, the projected growth in site-generated traffic is not anticipated to significantly impact traffic conditions on the adjacent street network or intersections. The all-way stop control at the surrounding intersections is expected to accommodate the additional traffic with minimal impact.

SUMMARY

The proposed expansion at Three Crowns Park is comprised of 26 additional independent living units, yielding 40 additional residents. Up to three additional employees are expected with five additional employees allocated to the main daytime shift. To support the proposed expansion, an increase of 28 off-street parking spaces is proposed resulting in a net total of 175 off-street spaces across various surface lots and an underground garage. The additional parking spaces would be largely located in a new surface lot extending from existing front surface lot. This proposed lot would include one-way traffic flow entering from the existing access drive on McDaniel Avenue and exiting to a new driveway aligned with an existing alley on Colfax Street.

Based on applying the current rate of peak parking demand per resident at Three Crowns Park to the planned growth, parking demand is projected to increase by 31 and 40 spaces during the Sunday and weekday peak hours, respectively. However, the combination of currently unoccupied parking capacity and the net addition of 28 off-street parking spaces is expected to accommodate the projected increase in peak parking demand associated with the proposed plan.

In addition to the planned improvements to off-street parking, the proposed parking plan also includes changes to the on-street parking along the west side of Pioneer Road. Specifically, the plan would shift the on-street parking spaces further west into the existing parkway area, thus limiting the obstruction to travel lanes and resulting in more usable parking and improved traffic conditions.

From a traffic perspective, the intersections in the surrounding area currently function well and are expected to continue doing so with the addition of traffic associated with the proposed plan. Most residents, even if they have a vehicle parked on site, do not drive regularly. For residents at senior living communities like Three Crowns Park, they typically drive in the middle of the day between morning and evening rush periods when traffic volumes tend to be lower and to avoid driving when it is dark outside. The additional associated with the proposed plan is not expected to have noticeable impact on traffic conditions at adjacent intersections.

ITE DATA

Land Use: 255
Continuing Care Retirement Community

Description

A continuing care retirement community (CCRC) is a land use that provides multiple elements of senior adult living. A CCRC enables a resident to transition in place from independent living to increased care as the medical needs of the resident change. Housing options may include various combinations of senior adult housing (both single-family and multifamily), congregate care, assisted living, and nursing home. The community may also contain special services such as medical, dining, recreational, communal transportation, and some limited, supporting retail facilities. A CCRC is usually a self-contained village. Senior adult housing—single-family (Land Use 251), senior adult housing—multifamily (Land Use 252), congregate care facility (Land Use 253), assisted living (Land Use 254), and nursing home (Land Use 620) are related uses.

Additional Data

Caution should be used when applying these data. CCRC developments consist of various housing components (dwelling units, rooms, and beds) that often exist in varying proportions. Therefore, the use of a single housing component may not fully represent the trip generation characteristics of these communities. The comprehensive independent variable—units—is the descriptor used in the data plots. This variable represents an aggregate of dwelling units for the single-family and congregate components of the CCRC and the beds in the assisted living component. To illustrate the varying proportions of housing options that exist in the database, the following table describes the residential units for nine of the CCRCs in the database.

Living Accommodations at CCRCs		
Dwelling Units	**Beds**	**Total CCRC Units**
215 (82%)	46 (18%)	261
220 (59%)	151 (41%)	371
620 (86%)	100 (14%)	720
312 (65%)	166 (35%)	478
210 (85%)	37 (15%)	247
323 (73%)	120 (27%)	443
233 (66%)	121 (34%)	354
209 (86%)	33 (14%)	242
234 (71%)	94 (29%)	328

A complete study of CCRCs requires future analysis of their various components. Therefore, it is important to collect as much information as possible. At the very least, the total number of

dwelling units, rooms, and beds should be obtained; if possible, the number of corresponding occupied units should be recorded as well.

The sites were surveyed in the 1980s, the 1990s, the 2000s, and the 2010s in Connecticut, Illinois, Maryland, Massachusetts, Ontario (CAN), Pennsylvania, and Virginia.
